Career Objective

A passionate Backend Developer focused on building secure, scalable, and efficient RESTful APIs with NodeJS and TypeScript. Eager to contribute to challenging projects and grow within a dynamic team.

Projects

YourTutor – Fully Functional Learning Management System (Backend) [Github link](#)

- Created a TypeScript and Express backend for a travel booking platform using MongoDB.
- Role-based access control, Bcrypt security, and JWT authentication were implemented.
- Cloudinary media uploads, SSLCommerz payments, and dynamic booking/product features are all integrated.

MyNextTrip - Travel Agency Web App (Backend) [Github link](#)

- Developed an Express application with roles for users, agencies, and administrators.
- Admin control, bookings, and profile management features are built in.
- Integrated REST APIs with authentication and secure cookie handling

EcoBazar - E-Commerce Platform (Backend) [Github link](#)

- created a backend application with Node.js, Express, React (Zustand for state), and MongoDB with JWT authentication.
- Features for managing users and admins, products, orders, reviews, and payments (COD & SSLCommerz) were developed.
- Cloudinary for images was integrated, and Helmet, Bcrypt, and Joi validation were used as secure practices.

Skills

Language

JavaScript (ES6+)

Typescript

Java (Intermediate)

MongoDB

PostgreSQL (basic)

Tools

Node.js

Express

Git

VS Code

REST APIs

SSLCommerz

Netlify

Vercel

Library

React
